

Congratulations, you have purchased a lifetime washable home air filter from the industry leader in washable air filtration. This filter is a direct replacement for your disposable furnace filter, and is designed to reduce contaminants in the air of your home. When your filter is dirty, simply clean with K&N® Home Air Filter Cleaner (#99-6010) and re-install.

INSTALLATION INSTRUCTIONS

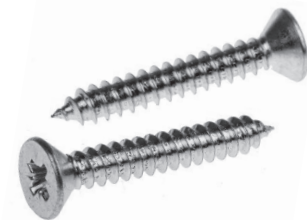

- Turn off your HVAC unit before installing your new filter.
- Remove your K&N® lifetime washable home air filter from the packaging. Check to ensure that there is no damage from the shipping process.
- Open the HVAC return air cover (HVAC filter access panel) and remove the dirty filter. **(refer to Fig. 1).**
- Install your new K&N® air filter into the air return. Note the directional flow arrows on the corners of the filter **(seen in Fig. 2).**
- Due to variances in construction, some HVAC returns may have the screws that protrude into the filter sealing area. If at first your K&N® air filter will not fit, you may need to replace the screws with the provided hardware **(refer to Fig. 3).**
- Close the HVAC return air cover (HVAC filter access panel). You can now turn the HVAC unit back on.
